INDUKURI NIRANJAN REDDY

Cybersecurity | SOC Operations | Cloud Security

indukuriniranjanreddy@gmail.com | LinkedIn | GitHub | TryHackMe

PROFILE

Final-year B.Tech CSE student focused on SOC operations and cloud security, with hands-on labs in SIEM alert triage, incident response, threat hunting, network analysis, Windows/Active Directory, Linux, and AWS security. Uses Splunk, Wazuh, Wireshark, MITRE ATT&CK, NIST incident-response practices, and least-privilege IAM to investigate and document security events.

TECHNICAL SKILLS

Security Operations: Alert triage, incident response, escalation, threat hunting, log analysis, malware triage, vulnerability assessment

Tools & Frameworks: Splunk, Wazuh, Wireshark, Nmap, Burp Suite, Metasploit; MITRE ATT&CK, NIST IR, CIS Benchmarks, D3FEND

Cloud & Systems: AWS (EC2, IAM, CloudWatch, CloudFront, Amplify, Elastic Beanstalk), Docker, Linux, Windows Server, Active Directory

Networking & Scripting: TCP/IP, DNS, DHCP, Windows Event Logs, syslog; Python, Bash, PowerShell, Git, GitHub

EXPERIENCE

Springrole India Private Limited (Springworks) - Operations Intern **Jul 2026 - Sep 2026**

- Completed a two-month internship with the Operations Team, supporting assigned operational tasks and delivering high-quality work with a self-motivated learning approach.

SELECTED PROJECTS

SOC Analyst Virtual Experience **Jan 2026 - Feb 2026**

- Triaged and escalated 15+ simulated phishing, malware, and unauthorized-access incidents using Splunk logs, endpoint alerts, PCAP analysis, and SOC playbooks.
- Mapped indicators and attacker behavior to MITRE ATT&CK across three scenarios; produced IOC and incident reports with root-cause, containment, and remediation guidance aligned to NIST IR practices.

Blue Team Security Lab **Dec 2025 - Jan 2026**

- Built a multi-VM Windows Server, Active Directory, and Ubuntu lab that simulates a corporate network for defensive-security testing.
- Investigated 8+ suspicious-activity patterns through Wireshark traffic analysis, Windows Event Logs, and Splunk correlation; hardened hosts with firewall, least-privilege, monitoring, and CIS-aligned controls.

VaultSentry - Secret Scanning Platform | GitHub

- Built a full-stack security platform that scans code repositories, local directories, and AWS S3 storage to detect exposed API keys, credentials, and secrets, using regex detection patterns and entropy-based analysis.
- Implemented ML-driven risk scoring (XGBoost and Random Forest with heuristic fallback) to prioritize findings, with a Python FastAPI backend, Celery background workers, and automated credential-rotation hooks for AWS, Stripe, and GitHub.
- Added GitHub repository scanning, Slack alerting, and Jira issue creation, plus a monitoring dashboard with role-based access control.

TheVaultSentry - AWS Cloud Infrastructure | GitHub **Oct 2025 - Dec 2025**

- Deployed an AWS environment using Amplify, Elastic Beanstalk, EC2, and CloudFront, with HTTPS enabled through managed SSL certificates.
- Configured CloudWatch alarms and dashboards and implemented least-privilege IAM roles and policies to improve visibility and reduce broad-access credentials.

TryHackMe - SOC Level 2 Path | Profile **Mar 2026 - Apr 2026**

- Completed blue-team labs in SIEM detection, endpoint analysis, incident response, malware triage, memory forensics, log correlation, privilege escalation, lateral movement, and C2 beaconing.

CERTIFICATIONS

CompTIA Security+ | CompTIA **May 2026**

Quick Heal DFIR | Quick Heal **Mar 2026**

EDUCATION

Lovely Professional University - B.Tech, Computer Science & Engineering **2023 - 2027**

Jalandhar, Punjab

BGS International Residential School - Class XII, Science (69%) **2022 - 2023**

Bengaluru, Karnataka
